

Annotate once, sync forever

Recap — what to remember

✓ Declare once

Put the hostname in your Ingress rule.
No dashboards, no copy-paste.

✓ Background reconciler

ExternalDNS watches the cluster and
syncs DNS — never in the traffic path.

✓ CNAME + TXT

CNAME does the routing; the TXT
registry record tracks ownership.

✓ Idempotent & self-healing

An UPSERT loop converges to the
desired state and re-runs safely.
